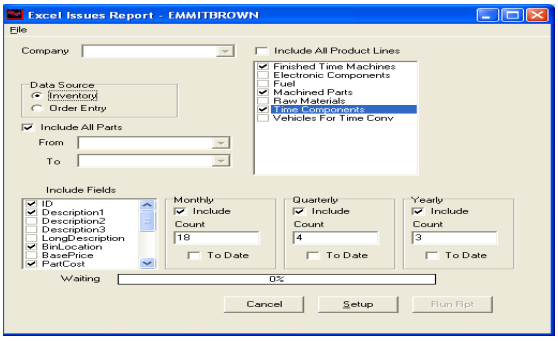
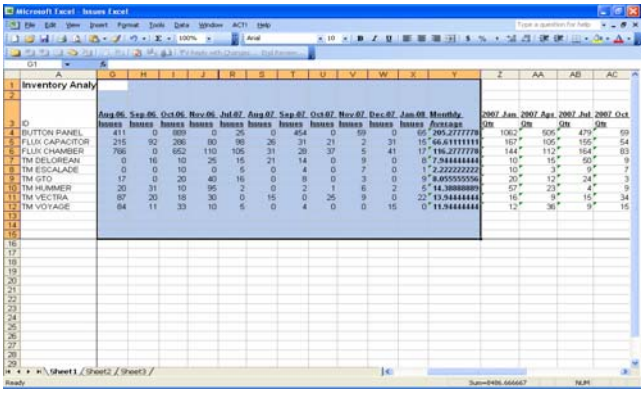
Better Inventory Management in Sage BusinessWorks

BSoft's Issues Report provides easy access to the issues data you need to effectively monitor and manage your inventory.

You want to know if you have issue patterns to prevent shortages! Open Issues Report, identify the part(s) or product line(s) you are interested in; select the fields you want included, the desired data type (monthly, quarterly, yearly) and the number of periods to include. Issues Report will generate a spreadsheet with all of the chosen data in an easy to read format. The report will show individual time periods as well as an average for the time period.



Monitor efficiency of inventory usage! Use the issues report to cross reference issues against sales and/or builds to determine the level of efficiency for inventory usage.



Better cash- flow management! Now that you have identified usage patterns, you can budget your inventory purchases more successfully, reducing shortages and minimizing excess inventory.

Track issues of "non-inventory" items! Issues Report has a special feature that allows you to track "non-inventory" items through the order entry line items. This feature gives you the capability to track issue patterns for your "non-inventory" items, just as it does your inventory items, providing you with a complete picture of all of your company's issues over a chosen time frame.

CHALLENGE	SOLUTION	RESULTS
Efficiently monitor and manage inventory issues and more accurately project inventory purchase needs, for better cash flow management.	Install BSoft's Issues Report	A detailed report with monthly, quarterly, and/or yearly issues data needed, to effectively monitor usage and efficiency, as well as project purchases.
